Hiring Manager
JPMorgan Chase & Co.

Subject: Application for Software Engineering Program Internship

Dear Hiring Manager,

I am writing to express my interest in the Software Engineering Program internship at JPMorgan Chase. I am currently a second-year B.Tech student in Computer Science and Engineering at GL Bajaj Institute of Technology & Management, and I am eager to apply my problem-solving skills and technical knowledge in a challenging engineering environment.

My primary interests lie in building systems that combine strong programming fundamentals with intelligent data processing. Recently, I developed a project called **BlackBoxCV**, an NLP-based resume evaluation tool built using Python, Streamlit, and transformer-based language models. The system analyzes resumes against job descriptions using semantic similarity and skill matching while also demonstrating how institutional signals can influence automated screening outcomes. Working on this project strengthened my understanding of natural language processing, model integration, and designing user-facing analytical tools.

Alongside project work, I am actively strengthening my foundations in **Data Structures and Algorithms**, primarily using Java, and regularly practice problem solving to improve algorithmic thinking and efficiency. I enjoy breaking down complex problems and building logical, scalable solutions—skills that I believe align closely with the engineering culture at JPMorgan Chase.

What attracts me most to the Software Engineering Program is the opportunity to work on technology that operates at massive scale while supporting critical financial systems. I am particularly excited about the chance to learn from experienced engineers, contribute to real-world products, and grow within an environment that values both technical excellence and collaborative problem solving.

I would welcome the opportunity to contribute my curiosity, discipline, and enthusiasm for building technology to your engineering teams. Thank you for considering my application.

Sincerely,
Anuj Kumar Mishra
